HEALTH AS A LIVING META SYSTEM: AXIOMS FOR POLICY, COMPLEXITY AND FLOURISHING

Health is inseparable from the ecological and social systems in which it unfolds. This lecture presents a meta systems perspective that links biological, social and ecological layers and sets out axioms for policy and institutional design oriented to human and planetary flourishing. Resonating with JSGP's practice engaged mission and CEASP's interest in complexity and quantum inspired modelling, the session connects nested complexity, uncertainty and value alignment to practical ecosystem design, governance and measurement. It will open pathways for collaborative research, PhD supervision and India UK pilots.

ANDY WILKINS

Founder of Future of Health,
Visiting Lecturer to UCL

Andy Wilkins is Founder of FUTURE OF HEALTH, visiting lecturer to UCL and course designer of the Leading Systemic Innovation in Healthcare programme at Imperial College Business School. He partners with governments, health systems, councils and international organizations to reimagine health as a living system oriented to human and planetary flourishing. Andy integrates the Three Horizons, Jobs To Be Done, values led design and systems thinking to help leaders align purpose, strategy, lived experience and enabling technology. His work invites system leaders to look beyond traditional measures of performance and imagine new futures, build cultures of learning and collaboration across sectors.
