LECTURE 4

Women's Work, Droughts, and Child Nutrition in India: Implications for Climate Adaptation

This paper assesses the role of women's household work participation as a climate adaptive strategy that differently influences child nutritional outcomes in drought-affected regions in India. Changes in the time use patterns of women in such regions are explored and associated with coping mechanisms to the historical drought variability in the region. The findings have implications for expanded public provisioning of childcare and income-generating policies in drought-prone regions.

SPEAKER

DR. ANJANA THAMPI

Assistant Professor, Jindal Global Law School

Thursday, 26 February 2026 || 3:00 pm - 4:30 pm
